

# Notice Against Covid-19 Vaccine Coercion/Mandate from Universal Health Organization

Date: 29 June 2022

To: Concerned authorities in college/institute/university, or private/public entity

**Subject: Notice against Covid-19 vaccine coercion or mandate for students/faculty/staff or any employee or client/visitor**

This letter is relevant to any college, institute, company, office, or any entity which has any policy discriminating based on vaccination status, in the context of the Covid-19 vaccines.

**Legal aspects:** On 02 May 2022, the Supreme Court of India struck down **Covid-19 vaccine mandates as disproportionate** (a copy of the judgment is attached; [link](#)). The basis of this was that even when Covid-19 was a public health concern, vaccinated as well as unvaccinated can get infected and spread the virus. Therefore, any discrimination based on the vaccination status is tantamount to **contempt of this Supreme Court order**.

**Medical aspects:** The Covid-19 vaccines are experimental, phase-3 trials are still ongoing, and they have not yet been approved as “vaccines”. It is well known that the vaccine efficacy [waned](#) within a few months. A recent pre-print study has concluded that the risk of severe adverse events after vaccination is more than the risk of Covid-19 hospitalization, for the mRNA jabs by Pfizer/Moderna ([link](#)). It is also worth noting that AstraZeneca (Covishield) has been banned in several European countries among the younger age-group (e.g. Spain, Belgium, Italy: [link](#)) since the adverse event risk is higher. The MoHFW [website](#) itself indicates several conditions under which the Covid-19 jabs are not advisable. At a population level too, these experimental vaccines have shown little positive effect in South/SouthEast Asian countries ([link](#)) or in US/Europe ([link](#)).

**Ethical aspects:** No one knows the answers to even basic questions about the Covid-19 vaccines: how many doses are needed (2 or 3 or 4 or 5 or...) or how often (every 3 or 6 or 9 months?), what is their efficacy and for how long, what long-term effects they may have on the immune system, reproductive system, their carcinogenicity, etc. Coercing a medical experiment on a fellow human is deeply wrong.

Colleges are places of higher learning and independent thinking. Evidence-based decisions are a must in such places as they set an example for the rest of society.

Thanking you,  
Yours Sincerely,

Bhaskaran Raman,  
On behalf of the Working Committee Members of Universal Health Organization
